

Title: The Solar System

The Solar System consists of the Sun and the celestial objects bound to it by gravity.

This includes eight planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.

The inner planets—Mercury, Venus, Earth, and Mars—are called terrestrial planets.

They are made mostly of rock and metal. The outer planets—Jupiter, Saturn, Uranus, and Neptune—are called gas giants.

The Asteroid Belt lies between Mars and Jupiter. It contains many small rocky bodies.

Pluto was once considered the ninth planet, but it is now classified as a dwarf planet.
